

JoeTools Crossheads Bring Higher Productivity to Fiber Optic Extruders

As fiber-optic technology continues to expand in telecommunications and network transmissions, cable manufacturers will be looking for system innovations to increase production, while maintaining the highest level of product quality. That opens the door for extrusion product manufacturer, JoeTools.

For many years, JoeTools has been responsible for developing industry standard and innovative solutions that have led to greater performance in wire and cable manufacturing. In fiber optics, JoeTools offers a selection of crossheads and tooling specifically designed to increase productivity, while meeting or exceeding product quality demands.

Among those are the JoeTools Multi-Conductor Heads. With this line of crossheads, the initial production time for extruding fiber optic cable is substantially reduced due to its unique, zero core-tube design that allows the operator to easily thread micro fibers into the die. This maximizes operator control and minimizes the time and intricacy of the process for greater productivity and less stress on optical fibers.

JoeTools also offers other heads that bring extreme efficiency to fiber extrusion, like the line of RN Heads, specifically designed for fine wire and fiber optic applications, and the Metric Head with years of proven performance. The JoeTools RN Head offers the ease of a fixed-center design with high balanced flow and precision concentricity, and the condensed, fixed-center design of the Metric Head reduces set-up time and delivers a superior level of efficiency, reliability and value to processors worldwide.

JoeTools designs and manufactures extrusion heads for a complete selection of outdoor and indoor fiber optic cables, including tight buffered, loose tubes, zip cords, ribbon, LSZH, aerial/self-supporting and armored designs, along with indoor/outdoor distribution and breakout cables. For more information on JoeTools' complete line of extrusion products, contact: JoeTools at +1 (877) 832-7864 or visit their web site at www.joe-tools.com
