

In-Line Head

J JOETOOLS

The In-line Head brings vast experience and success in extruding a wide range of Hose, Pipe and Tubing products.

With its In-line melt flow, this head offers a higher flow balance with minimized pressure fluctuation, for greater product stability and strength. And with better control in concentricity and the elimination of melt fracture, the In-line Head is ideal for small, fine tubing that requires a consistent wall thickness.

Design: Single or Multiple Layer, Adjustable

Features: In-line melt flow, maintaining a higher balance in flow and pressure

Benefits: Offers greater dimensional stability and strength, plus precision concentricity in fine tubing applications

Sizes: 9/32" and up

Striping: Single & multiple striping options
