

Joe-4 Head

T JOETOOLS

The Joe-4 is a fixed center, dual-layer crosshead for the simultaneous extrusion of two compound layers, and it is the choice for a wide variety of applications. Its co-extrusion capabilities increase process efficiency and offers an ideal course for raising productivity, while reducing the costs of operation. The Joe-4 Head also delivers exceptional performance with excellent concentricity and layer definition.

Design: Single Layer, Fixed Center

Features: Co-extrusion design for simultaneous 2-layer applications

Benefits: An extremely efficient system for increasing productivity and reducing operating costs

Sizes: 9/32" and up

Striping: Striping options available
