

Multi-Conductor Head

J JOETOOLS

The Multi-Conductor Crosshead is a JoeTools innovation that makes set up quick and easy. With its unique zero core tube design, the Multi-Conductor Head allows the operator to feed the conductors directly into the tip, changing what used to be a laborious and tedious task into a simple and easy process. And the Multi-Conductor Head can be manufactured for extrusion runs with as many as 50 conductors. This system can bring an enormous increase in productivity, especially with fine wire, multi-conductor runs of 20 or more.

Design: Single Layer, Fixed Center

Features: Zero core tube with 2 to 50 conductors fed directly into the tip

Benefits: The zero core tube design allows easy string ups for multi-conductor projects reducing set up time and operating costs

Sizes: 9/32" and up

Striping: Striping options available
