

# Switcher™ Head

## **J** JOETOOLS

The Switcher™ brings extreme efficiency to extrusion processing with its ability to run 2 consecutive colors without stopping the production process. This dual layer, coextrusion technology easily diverts compound from 2 extruders onto the inner and outer layers of the extruded product. So, when the first production quantity is completed, simply shift the Color Layer Switch to transpose the inner and outer layers and the next production run begins! There's no waste... no additional set uptime. Just exceptional performance and productivity.

**Design:** Dual Layer, Fixed Center color inversion head

**Features:** No bleed color change system with an easy, manually-operated switch valve

**Benefits:** Reduce production time and waste while increasing productivity and profits

**Sizes:** 9/32" and up

**Striping:** Striping options available
