No Set Up Time!  
And No Down Time!**

# Introducing The Switcher™ Crosshead From JoeTools.

Switch Color  
Easily & Reliably With  
The JT Color Layer  
Switch Valve!

**Reduce Production Time!  
Eliminate Waste!  
And Increase Productivity!**  
**With JoeTools Switcher™  
Crosshead... The Job's Done!**

The Switcher™ brings extreme efficiency to extrusion processing, because of its unique design, which can continuously run 2 consecutive colors without stopping the production process. And with rising demands to cut costs, the Switcher Head is a perfect solution.

The Switcher offers the coextrusion technology of the JT Color Layer Switch Valve, which diverts a balanced flow of compound from 2 extruders onto the inner and outer layers of the applied insulation. So, as the first production quantity is completed, simply shift the Color Layer Switch Valve to transpose the inner and outer layers... and you're ready to begin the next production run! There's no waste... no additional set up time. Just exceptional performance and productivity.

And designed with JoeTools quality engineering... you can depend on the Switcher Head for easy operation, absolute reliability and precision concentricity. Plus, the Switcher offers multiple striping options. For more information, contact JoeTools at...
